

schick[®]
TECHNIK GmbH

Member of Schick Gruppe

PLANT CONSTRUCTION

The name of Schick is synonymous with quality and reliability. Schick Technik is a trustworthy partner of key industries.

We fulfil our customers' demands; with our products, our service and our reliability, our aim is to guarantee their success.

Our engineers and technicians develop the concept that is individually adapted to your needs. This concept is based on the properties of the gases in question, the type of application, the expected consumption and the environmental

conditions on site.

In 1996, we introduced a quality management system, and since then we have proved regularly that our QM system meets the requirements of the DIN EN ISO 9001:2000 standard, fulfilling the customers' wishes with the highest degree of safety and quality at all times.

Our supply plants ensure that your gases are always available in the desired quantities and at the required pressure, and guarantee maximum efficiency and plant safety.

Ammonia and sulphur dioxide supply plants

Regulations, Selection, Project planning, Areas of application, Limits of application, Planning, Construction, Inspection, Acceptance, Maintenance, Documentation, Duties of operators, Periodical inspections, Repair, Training, Safety instruction, Room monitoring systems, Safety equipment, Accessories.

And what can we do for you?
